

# MSD of Martinsville Employee Guidance

Updated 8/10/2021

## **Vaccinated**

- Individuals are fully vaccinated once two full weeks have passed since their second dose of Pfizer/Moderna or single dose of Johnson and Johnson.
- Individuals who have had a lab confirmed COVID-19 positive test within 90 calendar days may follow this guidance.

**Symptoms:** Individuals with COVID symptoms that they don't usually experience should seek testing. Testing can be done at Activate, CVS, Walgreens, or a location listed on <https://www.coronavirus.in.gov/2524.htm>. Home tests should not be used.

**Close Contact:** Vaccinated individuals do not need to quarantine as long as they stay symptom free. If at any point symptoms develop, the vaccinated individual should enter quarantine and seek testing. It is recommended that individuals do seek testing 3-5 days after exposure if they are a close contact. This is not a requirement.

## **Unvaccinated**

**Symptoms:** Individuals with COVID symptoms that they don't usually experience should seek testing. Testing can be done at Activate, CVS, Walgreens, or a location listed on <https://www.coronavirus.in.gov/2524.htm>. Home tests should not be used.

**Close Contact:** Unvaccinated individuals must complete either a 10-day or 14-day quarantine. The Morgan County Health Department does not recommend a 7-day quarantine at this time. Individuals who are completing a 10-day quarantine must take enhanced precautions through day 14. Please see the MSD of Martinsville Quarantine Guidance for more information.
